WebLOQ® and Network Solutions® Announce Strategic Partnership

Network Solutions® to Resell and Market WebLOQ's Secure, Private and Compliant Email Solutions

Monterey, Calif. (May 19, 2010) – WebLOQ, Inc., a leader in privacy solutions for secure and compliant business communications, today announced its partnership with Network Solutions®, a leading provider of web-based solutions for small businesses. Network Solutions will offer its customers WebLOQ's secure email product and compliance solution, LOQMail. Partnering with Network Solutions gives WebLOQ a channel to deliver its secure email product and complementary services to the small-medium business market.

"We've chosen to partner with WebLOQ® because their products are easy to use and provide our customers with an affordable, secure, private and compliant email communication solution," said Navin Ganeshan, Senior Director Product Management at Network Solutions. "We look for technology partnerships like WebLOQ that complement the needs of our customers and provide real and immediate value."

More than ninety percent of businesses in the United States fall into the small business market category yet they are one of the most underserved when it comes to affordable, robust technology based solutions that are developed for large enterprises. LOQMail is tailored for the small business market and ensures that personal information, sensitive data and confidential materials are transmitted securely. LOQMail is successfully helping organizations across financial services, insurance, healthcare, legal, accounting, government, defense and law enforcement gain the cost savings and efficiencies of email, while making sure that correspondence are compliant with growing national and state privacy regulation.

"Network Solutions is synonymous with the Internet, a pioneer in domain registration and in supporting brand identity of companies around the globe," said Neal Smith, president and CEO at WebLOQ. "We believe that this partnership will be mutually beneficial to both organizations and more importantly the small –medium business community that has a pressing and immediate need for secure and compliant business communications."

Highlights of LOQMail include:

Integrates with existing email clients

LOQMail simply integrates directly into existing email software such as Microsoft Outlook, Apple's Mac Mail and Mozilla's Thunderbird to provide a trusted

communications channel to ensure that sensitive email, documents and personal information are delivered and received only by the intended recipients.

Simplifies private and secure communication with others

Customers can simply sign up for LOQMail and invite others so they can both send and receive LOQMail and be assured that it is secure and compliant.

Provides automatic dual-layer encryption to entire message

Using LOQMail to send private and secure messages to other LOQMail users ensures dual-layer encryption to the entire message header, body and attachments. No one other than the sender and intended recipients know who the message went to and what it was about.

Shields from hackers, phishing attacks, spam and malware

LOQMail is transmitted over a completely private and secure email channel. The LOQMail community is shielded from hackers, phishers, spam or malware. Email here can be sent with confidence and the senders know that their documents and communications are secure.

Meets encryption requirements

LOQMail is a compliance solution that works alongside current email. No new work processes are necessary. Users simply select their LOQMail account when they need to send sensitive information to other LOQMail registered recipients. Using LOQMail for correspondence and the transfer of documents and files meets the encrypted email requirements for data-in-motion of HIPAA, GLBA, California SB-1386, & Sarbanes-Oxley.

Demonstrates and proves compliance

The available LOQMail Compliance Activity Report tracks the successful delivery of private emails. All emails are assigned a unique tracking number that automatically links through all replies and forwards. This on-demand reporting reveals the entire chain-of-custody of the email throughout its history to the user.

Secures wireless email communication

Anytime an email is sent over the open internet, it is like sending a postcard and vulnerable to prying eyes. Sending an email wirelessly from a Wi-Fi hotspot, hotel or airport can be dangerous. LOQMail solves this problem and keeps sensitive information secure and private between users.

Partnering with Network Solutions has also set the stage for companies to upgrade to personalized community names other than the “loqmail.secure” extensions to promote their personal or company brand. This includes adding custom email addresses that reflect company name and/or brand “@COMPANYNAME.secure” or “@COMPANYNAME.private” naming convention. To get LOQMail, sign-up for a FREE 30-day trial and learn more visit www.networksolutions.loqmail.com.
