WebLOQ Announces Free Secure Email Accounts for Individuals and Businesses

LOQMail Provides Double-Encrypted Email Transmissions Within Outlook, Thunderbird, Windows Mail and Mac Mail for Free

Monterey, Calif. – September 16, 2009 – WebLOQ, Inc., a leader in privacy solutions for secure and compliant business communications, today announced a free version of LOQMail, the company's secure email solution. Available for download immediately at www.LOQMail.com, LOQMail is ideal for both individuals and businesses that want to transmit personal information, sensitive data and confidential materials securely to comply with growing national and state privacy regulation.

With a simple download into the individual's preferred email client (Outlook, Thunderbird, Windows Mail, Mac Mail, etc.), LOQMail integrates directly into email as a new private communications channel. The LOQMail account, such as NAME@loqmail.secure, sends only to other LOQMail users to ensure that sensitive email, documents and personal information are delivered and received only by the intended recipients. LOQMail provides state of the art double-encryption to the entire email, including the subject line, email body, attachments and recipient details. LOQMail messages are transmitted over WebLOQ's private network of domains that are not subject to spam, phishing and other malware. Benefits to users signing up for a free LOQMail account include:

- Free to the individual users, not just a trial version
- Customize private email addresses with the "@loqmail.secure" naming convention
- Securely communicate and transfer information with WebLOQ's double-encryption technology applied to the entire email (including the header sender/receiver, subject line, body and attachments)
- Safely communicate with confidence to other WebLOQ users (LOQMail, LOQMail Pro or Enterprise)
- Website support

Built upon the fifth generation of the WebLOQ architecture, the free version of LOQMail will also add significant value to those that leverage WebLOQ's more comprehensive offerings, LOQMail Basic, LOQMail Pro and LOQMail Enterprise, by expanding who they can securely, privately and compliantly exchange email. With the introduction of LOQMail, companies that use LOQMail solutions can now easily extend their private communications' network with associates, partners and clients at no cost. For example, a financial advisor or healthcare provider will now be able to efficiently communicate directly with clients to transmit and share sensitive information such as financial statements or medical records by simply having them download and use the free LOQMail solution.

“LOQMail eliminates the security shortcomings of today’s standard email and provides a robust, easy to use solution that ensures that sensitive information is shared with only those that you want to communicate with,” said Neal Smith, CEO at WebLOQ. “LOQMail is streamlining business efficiencies by allowing industries that previously needed to courier, express mail and fax confidential data to be easily and safely transmitted by using a familiar business process of “emailing” in a secure manner. WebLOQ expects that our free LOQMail client will have a viral impact as individuals download the application and share it with colleagues and associates with whom they need to privately communicate.”

The LOQMail solution is free and ready to use; however businesses and users who want a more comprehensive offering have the ability to upgrade to LOQMail Basic, LOQMail Pro or LOQMail Enterprise. These solutions include compliance reporting and the assigning of private domains other than the “loqmail.secure” extensions to promote their company’s brand. Other benefits include telephone support and access to the WebLOQ email mail directory. A full list of features is available at www.LOQMail.com.

About WebLOQ

WebLOQ enables secure, private and compliant electronic communications. Combining revolutionary technology with unrivaled ease-of-use, WebLOQ’s suite of LOQMail solutions simply integrate directly into users’ email to provide a trusted communications channel to ensure that sensitive email, documents and personal information are delivered and received only by the intended recipients. Emails sent via LOQMail are protected with state of the art double-encryption and are transmitted over WebLOQ’s private network of domains that are not subject to spam, phishing, and malware for comprehensive security. Its flagship products include auditable reports that trace delivery confirmations with an individual tracking number to easily demonstrate compliance to regulators and facilitate eDiscovery.

LOQMail is successfully helping organizations across financial services, insurance, healthcare, legal, accounting, government, defense and law enforcement gain the cost savings and efficiencies of email, while making sure that correspondences are compliant with growing national and state privacy regulation. WebLOQ is headquartered in Monterey, CA and more information is available at www.webloq.com , or by calling (888) 815-0008.
